EXPERIENCE

Research Software Engineer II <i>Princeton University, Princeton, NJ</i>	2024 - Present
– Developed and optimized GPU-accelerated scientific codes in collaboration with computational astrophysics research groups – Extended Iseult, a Particle-in-Cell visualization code, adding key features and fixing long standing issues – Ported the hydrodynamics code Ramses to GPUs as a proof of concept, achieving a 20-30x speedup – Developed PegasusTools, a Python package for analyzing Pegasus++ PIC data, achieving 15-150x speedups – Optimized the multiphysics astrophysical code Fornax, achieving a 1.8x speedup on the Aurora exascale supercomputer – Ported the Athena++ astrochemistry module to the exascale GPU code AthenaK – Contributed to the BDF ODE solvers in Kokkos Kernels	
Ph.D. Candidate <i>University of Pittsburgh, Pittsburgh, PA</i>	2018 - 2024
– Expanded Cholla, a massively parallel GPU-accelerated code for simulating astrophysical fluid dynamics to include magnetic fields (magnetohydrodynamics/MHD) using state of the art methods. – Collaborated with the Frontier Center for Accelerated Application Readiness (CAAR) program to optimize Cholla to run on exascale supercomputers, namely Frontier. – Established and executed a robust testing framework for Cholla, employing GoogleTest with custom extensions to ensure software reliability and quality. – Led multiple initiatives to promote scientific software best practices within the Cholla development team, fostering excellence in software engineering standards.	
Masters Student <i>Bowling Green State University, Bowling Green, OH</i>	2016 - 2018
– Conducted original thesis research into the properties of symbiotic star V1835 Aql, and other stars in the same field, with Professor Andrew Layden as advisor. – Determined the properties of variable star systems through image and data analysis in Python.	
Undergraduate Research Assistant <i>Purdue University, West Lafayette, IN</i>	2015 - 2016
– Built an experimental optics system to observe the effect of various chemotherapy drugs on cancer tumors. – Reduced experimental data analysis and archiving time from ~10 hours to ~30 minutes.
